

In 1999, Peter Leleu invented the Paraflex as a solution for a problem that he was facing almost daily: umbrellas that caught the wind and flew off. A practical, hands-on design that has proven attractive for both the project sector and private individuals. Peter is now Sales Manager at Umbrosa.

Peter Leleu

CONCEPT

Nothing beats the versatility of the human body. As a result, for the Paraflex, we let ourselves be inspired by the manoeuvrability and strength of the human arm. A space-saving solution, without a base and without a pole, which offers you the possibility to create shade wherever you want it, by means of one, two or more umbrellas, according to your needs. The light and compact Paraflex offers maximum shade and is highly wind-resistant.

TRUMPS

- Flexible arm: shade where you want it
- No base + no central pole => space-saving
- Configuration according to your needs
- Light, compact and strong

NICE TO KNOW

The Paraflex collection consists of 2 holders, the Classic of 1,85 m and the Neo of 2 m, this last one has a more flat design and is easier to use. There are 4 Paraflex parasols, 2 square (1,9 - 2,3 m) and 2 round models (2,7 - 3). The largest parasols (2,3 m square and 3 m round) can only be used with the Neo holder. A universal protection cover is available for all models.

The flexible arm enables you to create shade wherever you want it.

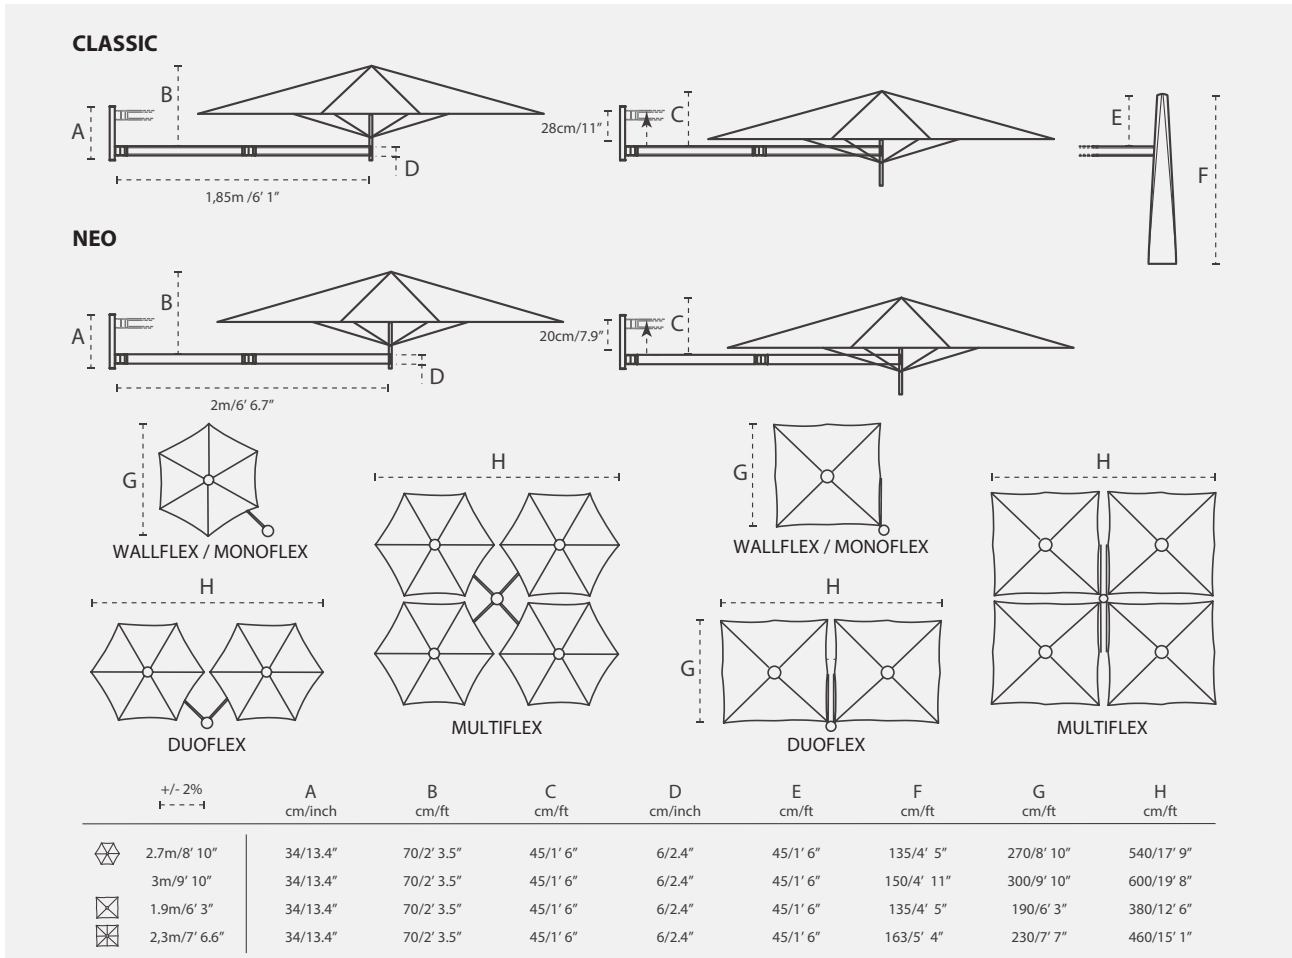

The paraflex can be tilted by pressing the button.
So you have the perfect shade at a low evening sun.

The high quality frame is made of anodized aluminum with UV resistant polyamide components.
All parts can be replaced separately.
